Contact: Peter F. De Lisle, Technical Director

Acute Test Results*-Untreated Sample										
Species-Test Method	48-h LC50	95% C.L.	T.U.Ac	NOAEC						
C. dubia EPA 2002.0	>100	N/A	1.00	100						
P. promelas EPA 2000.0	>100	N/A	1.00	100						

Acute Test Results*-UV Irradiated Sample										
Species-Test Method	48-h LC50	95% C.L.	T.U.Ac	NOAEC						
C. dubia EPA 2002.0	>100	N/A	1.00	100						
P. promelas EPA 2000.0	>100	N/A	1.00	100						

For each test method record the T.U.Ac value (bold) on the DMR.

Details regarding test conduct and data analysis provided in attached bench sheets and printouts.

Acute Test QA/QC	Reference Tox	icant: KCl Unit	s: mg/l Test O	g/l Test Organism Source: CBI Stock Cultures

Client Sample ID: Possum Point Power Station Outfall 010

Permit No: VA0002071 Sample Period: 2/8/16

#### GLOSSARY OF TERMS AND ABBREVIATIONS

A.L. (Acceptance Limits): The results of a given reference toxicant test are compared to the control chart mean value  $\pm 2$  standard deviations. These limits approximate the 95% probability limits for the "true" reference toxicant value.

Chronic Value (ChrV): The geometric mean of the NOEC and LOEC. Units are same as test concentration units.

C.L. (Confidence Limits): These are the probability limits, based on the data set and statistical model employed, that the "true value" lies within the limits specified. Typically limits are based on 95% or 99% probabilities.

Control chart: A cumulative summary chart of results from QC tests with reference toxicants. The results of a given reference toxicant test are compared to the control chart mean value and 95% Acceptance Limits (A.L.) (mean  $\pm 2$  standard deviations).

IC25: The concentration of sample or chemical, calculated from the data set using statistical models, causing a 25% reduction in test organism growth, reproduction, etc. The lower the IC25, the more toxic the chemical or sample. Units are same as test concentration units.

LC50: The concentration of sample or chemical, calculated from the data set using statistical models, causing a 50% reduction in test organism survival. The lower the LC50, the more toxic the chemical or sample. Units are same as test concentration units. Note: The LC50 value must always be associated with the duration of exposure. Thus 48-h LC50, 96-h LC50, etc. are calculated.

LOEC: Lowest-observable-effect-concentration. The lowest concentration of sample or chemical in a chronic test dilution series in which the test organisms exhibit a statistically significant reduction in any of the test end points (e.g. growth, survival, reproduction) compared to control organisms. Units are same as test concentration units.

PMSD: Percent Minimum Significant Difference: The minimum difference which can exist between a test treatment and the controls in a particular test and be statistically significant; a measure of test sensitivity. The lower the PMSD the more sensitive the test.

N/A: Not applicable.

N/D: Not determined or measured.

NOAEC: No-observable-acute-effect-concentration. The highest concentration of sample or chemical in an acute test dilution series in which the test organisms exhibit no statistically significant reduction in the test end point (e.g. survival) compared to control organisms. Units are same as test concentration units.

NOEC: No-observable-effect-concentration. The highest concentration of sample or chemical in a chronic test dilution series in which the test organisms exhibit no statistically significant reduction in any of the test end points (e.g. growth, survival, reproduction) compared to control organisms. Some regulatory definitions also require that the NOEC be less than the LOEC. Units are same as test concentration units.

Q.L.: Quantitation Limit. Level, concentration, or quantity of a target variable (analyte) that can be reported at a specified degree of confidence.

T.U.: Toxic units. Expresses the relative toxicity of an effluent in such a manner that the larger the toxic unit value the more toxic the effluent. T.U.,  $_{Ac} = 100/LC50$ . T.U.,  $_{Chr} = 100/NOEC$ . A dimensionless unit.
